

1, Configure networks table for all the examples:

```
]# lsdef -t network
10_0_0_0-255_0_0_0 (network)
20_0_0_0-255_0_0_0 (network)
30_0_0_0-255_0_0_0 (network)
40_0_0_0-255_0_0_0 (network)
60_0_0_0-255_0_0_0 (network)
70_0_0_0-255_0_0_0 (network)
```

2, Design confignetwork usage to compare with confignics, I assume after confignetwork integrate configeth, it can realize functions in the confignetwork column as this table. Functions in blue are new functions for confignetwork, we should add new functions in blue into confignetwork; Current confignetwork support redhat.

Usercase and Functions	Configure DB tables	Confignics usage	Confignetwork usage	output
Scenario 1: CN has 1 Ethernet interface as provision NIC. Use configure network to configure this installnic as static ip 10.5.106.9	1, Networks table configuration: ~]# lsdef -t network 10_0_0_0-255_0_0_0 Object name: 10_0_0_0-255_0_0_0 gateway=10.0.0.103 mask=255.0.0.0 net=10.0.0.0 tftpserver=10.5.106.1 2, Node definition:	updatenode bybc0609 "" confignics -s"	updatenode bybc0609 "confignetwork -s"	Configure installnic static ip, rewrite ifcfg-eth0 file, configure default gateway

	<pre>]# lsdef bybc0609 -i ip Object name: bybc0609 ip=10.5.106.9</pre>			
Scenario2: CN has a nic, it is not the provision nic, user want to configure this nic with static ip 10.4.41.5. He can use configure secondary nics function	<pre>1,Networks table configuration: ~]# lsdef -t network 10_0_0_0-255_0_0_0 Object name: 10_0_0_0-255_0_0_0 gateway=10.0.0.103 mask=255.0.0.0 net=10.0.0.0 tftpserver=10.5.106.1 2,Nics table configuration:]# lsdef bytest15 sed 's/ //g' grep '^nic' nicipis.eth1=10.4.41.15 nicnetworks.eth1=10_0_0_ 0-255_0_0_0 nictypes.eth1=Ethernet</pre>	updatenode bytest15 co nfignics	updatenode by test15 config etwork	Configure secondary nics static ip, rewrite ifcfg-* files; It also should support multple ips for nics.
Scenario3: CN has 2 nics, eth0 is installnic, eth1 is secondary nic. User can use `confignetwork -s` to configure both installnic and secondary	<pre>1,Networks table configuration: ~]# lsdef -t network</pre>	updatenode bytest15 co nfignics -s	updatenode by test15 config etwork -s	

nic	<pre> 10_0_0_0-255_0_0_0 Object name: 10_0_0_0-255_0_0_0 gateway=10.0.0.103 mask=255.0.0.0 net=10.0.0.0 tftpserver=10.5.106.1 Object name: 20_0_0_0-255_0_0_0 mask=255.0.0.0 mgtifname=br-eno1.1 net=20.0.0.0 tftpserver=20.5.106.1 2,nics table configuration:]# lsdef bytest15 sed 's/ //g' grep '^nic' nicip.s.eth1=20.4.41.15 nicnetworks.eth1=20_0_0_ 0-255_0_0_0 nictypes.eth1=Ethernet </pre>	updatenode bytest15 co nfignics		
Scenario 4: User wants to configure nics and customize some parameters in ifcfg-* file, for example, he wants to customize MTU and IPV6INIT value for nic eth1, he can use nicextraparams in nics	1,Networks table configuration: ~]# lsdef -t network 10_0_0_0-255_0_0_0	updatenode bytest15 co nfignics	updatenode by test15 confign etwork	Write nicextrapara ms into ifcfg-* files,

table	<p>Object name: 10_0_0_0-255_0_0_0 gateway=10.0.0.103 mask=255.0.0.0 net=10.0.0.0 tftpserver=10.5.106.1</p> <p>2,Nics table configuration:]# lsdef bytest15 sed 's//g' grep '^nic' nicextraparams.eth1=MTU =1460 IPV6INIT=no nicips.eth1=10.4.41.15 nicnetworks.eth1=10_0_0_ 0-255_0_0_0 nictypes.eth1=Ethernet</p>			it also take effect live.
Scenario 5: Run customized scripts, there are 2 ways to run customized scripts: 1, using `confignics --script <myscript>`, confignetwork will take over confignics --script function specified in this line. 2, define niccustomscripts in nics table, you can find the usage by `tabdump -d nics`, using niccustomscripts do not affect confignetwork code change.	If customized scripts use xCAT db data, should configure DB according to scripts requirements	Confignics --script <myscript>	Confignetwork --script <myscript>	Run myscript

<p>Scenario 6(low priority): CN has IB adapter. Confignetwork call configib directly to realize configure IB adapter, here just give one example</p>	<pre>1, networks table: chdef -t network -o ib0ipv41 net=20.0.0.0 mask=255.255.255.0 mgtifname=ib0 chdef -t network -o ib0ipv42 net=30.0.0.0 mask=255.255.255.0 mgtifname=ib0 chdef -t network -o ib0ipv61 net=1:2::/64 mask=/64 mgtifname=ib0 gateway=1:2::2 chdef -t network -o ib0ipv62 net=2:2::/64 mask=/64 mgtifname=ib0 gateway= 2,nics table: chdef <node> nicips.ib0="20.0.0.3 30.0.0 .3 1:2::3 2:2::3" nicnetworks.ib0="ib0ipv41 ib0ipv42 ib0ipv61 ib0ipv6 2" nictypes.ib0="Infiniband"</pre>	<p>updatenode <node> -P "confignics --ibaports=2 "</p>	<p>updatenode <node> -P "confignetwor k --ibaports=2"</p>	
--	---	--	--	--

<p>Scenario 7:</p> <p>CN has Ethernet nic eth0, user wants to configure 2 vlans, Configure vlan eth0.6 60.5.106.9 and eth0.7 70.5.106.9 based on ethernet nic eth0:</p> <pre>{eth0.6} <-(vlan)- {eth0} {eth0.7} </pre>	<p>1, Networks table configuration: <pre>]# lsdef -t network 60_0_0_0-255_0_0_0,70_ 0_0_0-255_0_0_0</pre> Object name: 60_0_0_0-255_0_0_0 mask=255.0.0.0 net=60.0.0.0 tftpserver=60.5.106.1 Object name: 70_0_0_0-255_0_0_0 mask=255.0.0.0 net=70.0.0.0 tftpserver=70.5.106.1</p> <p>2, Configure nics table for node: <pre>]# lsdef bybc0609 sed 's/ //g' grep '^nic' nictypes.eth0=ether nicnetworks.eth0.6="60_0 _0_0-255_0_0_0" nicnetworks.eth0.7="70_0 _0_0-255_0_0_0" nictypes.eth0.6=vlan</pre></p>	NA	updatenode by bc0609 config network	
---	--	----	---	--

	nictypes.eth0.7=vlan nicips.eth0.6=60.5.106.9 nicips.eth0.7=70.5.106.9 nicdevice.eth0.6=eth0 nicdevice.eth0.7=eth0			
Scenario 8: CN has 2 Ethernet nics, eth2 and eth3, user configures bond bond0 using ethernet nic eth2 and eth3 {bond0} <-(bond)- {eth2+eth3}	1,Networks table:]# lsdef -t network 30_0_0_0-255_0_0_0 Object name: 30_0_0_0-255_0_0_0 mask=255.0.0.0 net=30.0.0.0 tftpserver=30.5.106.1 2,Configure nics table for node:]#]# lsdef bybc0609 sed 's/ / /g' grep '^nic' nicnetworks.bond0=30_0_0_0-255_0_0_0 nictypes.eth2=ethernet nictypes.eth3=ethernet nictypes.bond0=bond nicips.bond0=30.5.106.9	NA	updatenode by bc0609 config network	

	nicdevice.bond0="eth2 eth3"			
Scenario 9: CN has 2 Ethernet nic eth2 and eth3, user wants to bond them to bond0, then make 2 vlan bond0.2 and bond0.3 for data network. Use confignetwork to configure bond bond0 using eth2 and eth3,configure vlan bond0.2 and bond0.3: {bond0.2} <-(vlan)- {bond0} <-(bond)- {eth2+eth3} {bond0.3} 	<pre> 1,Configure networks table:]# lsdef -t network 30_0_0_0-255_0_0_0,40_ 0_0_0-255_0_0_0 Object name: 30_0_0_0-255_0_0_0 mask=255.0.0.0 net=30.0.0.0 tftpserver=30.5.106.1 Object name: 40_0_0_0-255_0_0_0 gateway=<xcatmaster> mask=255.0.0.0 net=40.0.0.0 tftpserver=40.5.106.1 </pre> <p>2,Configure nics table for node bybc0609:</p> <pre>]# lsdef bybc0609 sed 's/ //g' grep '^nic' </pre>	NA	updatenode by bc0609 config network
